PRIMAVERA INTEGRATION

"Primavera allows our businesses the autonomy to run the way they see fit. But it also provides a coordinating function. We are no longer working in silos. Instead, we are setting priorities and really working on things that will bring the entire organization forward." -The Principal Financial Group

WTA Consulting can integrate **Primavera** with your systems to meet the high levels of functionality demanded by all of your users by:

- **Linking Project Management Systems and disparate systems into a single, powerful business application**
- **Automatic data extraction, transformation and movement into or out of Primavera, enabling more accurate decision making**
- **Minimizing the risks of introducing new technologies and defining roadmaps for future integration to business applications**
- **Initial conversion and loading of project data into Primavera**
- **Consolidation of information from different sources, including ERP, Financial, Work Order Management, H/R, Time Keeping, Document Control and other systems.**

WTA Consulting's **Primavera** Application Integration Practice offers a systematic approach to integrating existing applications and project management processes.

Primavera Integration services are essential to achieving an integrated electronic business environment across the extended enterprise.

Primavera Integration enables communication between all involved groups, allowing intimate yet controlled interaction with the enterprise's core project management information.

Separate enterprise systems must look and act as one integrated environment to employees, clients and suppliers.

Call WTA Consulting at 419-897-6999 to integrate Primavera with your system today!

“I want you to know how pleased I am with this work. I know that the quality will surpass my expectations. Thank you for coming through for us.”

Bill Bevard, Outage Supervisor, Ameren/UE Callaway Plant

PRIMAVERA INTEGRATION

Services/Engagements:

- Integration Business Process Design
- Technical Architecture Definition
- Automated Data Integration
- Data Conversion & Migration
- Custom Software Development
- Web Application Design & Development
- Application Installation & Upgrades
- Rollout Planning and Execution
- Infrastructure Design and Implementation
- Primavera Integration API
- Primavera SDK
- Primavera Technical Support
- Database Administration
- Production Application Support

Industries Served:

- Energy
- Petroleum
- Utility
- Construction
- Engineering
- Manufacturing

Applications Supported:

- Work Orders
- Asset Management
- Financial Systems
- Time / Cost Reporting
- Engineering Data
- Resources, plus others!

Recent Successes:

Designed, developed and implemented a two-way interface between an in-house mainframe work control application and Primavera Enterprise. Later migrated interface functionality to integrate to work with client/server Sybase/PowerBuilder software package.

Created a Web-based Schedule Reporting Application, providing pre-defined reports and customizable search access to schedule information for a plant-wide audience.

Designed, developed and implemented a Schedule Performance Indicator System, with automated including of Primavera and work management data, presented in an easy-to-use graphical web-based application with detail drill down capability.

Enabled successful Primavera implementation by performing critical role of designing, developing, planning, and executing initial data conversion and cutover.
